

# 1 Power BI Assignment 1

- 1) Read the adult.csv file available in the **data** folder on the KNIME Hub. The data are provided by the [UCI Machine Learning Repository](#).
- 2) Extract people with age between 20 and 40 (both included) and working in a workclass starting with "S"
- 3) Extract people with age between 40 and 60 (both included) and working in a workclass starting with "P"
- 4) Concatenate both subsets into a single data table

## 1) Read the adult.csv file

## 2 Power BI Assignment 1

- 3) Extract People with age between 40 and 60 (both included) and working in a work class starting with “P”

The KNIME workflow starts with a CSV Reader node. Its output is split into two parallel paths. The first path contains a Row Filter node with the condition 'age' >= 40 and a second Row Filter node with the condition 'workclass' starts with 'P'. The second path contains a Row Filter node with the condition 'age' <= 60. The outputs from both paths are concatenated into a single table.

**Row Filter (Top Path):**

- Filter column: age
- Operator: Greater than
- Value: 40

**Row Filter (Bottom Path):**

- Filter column: age
- Operator: Less than or equal to
- Value: 60

**Concatenate Node:**

- How to combine input columns: Union
- RowID handling: Create new

**Table View:**
